

Ransomware

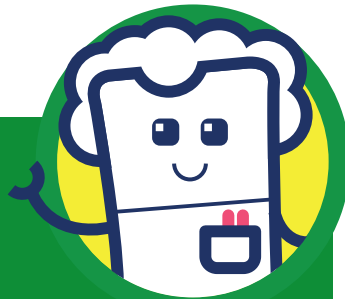

Ransomware is a form of malicious software allowing criminals online to lock files on your business devices.

Criminals will then inform you that your files will not be unlocked until a sum of money is paid.

How to protect your business:

- Ensure your anti-virus software and firewall are up-to-date on all devices
- Fully install software updates as soon as they appear
- Do not click on links or open attachments in unexpected emails
- Back up your files to external hard drives, online storage or USB sticks but make sure that they aren't left connected to the computer
- Do not insert unknown USB sticks into your computer
- Advise your staff to only visit websites you know you can trust

To report a concern contact: Action Fraud **0300 123 2040**
